

INVENTORY MANAGEMENT SUITE™ Demand Collaboration Portal

RockySoft's Demand Collaboration Portal (DCP) is a native Web-based tool for collaborative forecast development. Provides browser based access for working more effectively to collaboratively capture external forecast information from internal and external team members, eliminating the need to coordinate updates through cumbersome spreadsheets. Collaborate to build the most accurate forecasts by enabling everyone involved in demand management to work cooperatively via the Internet. DCP enables synchronized modifications, forecast process workflow and automatic consolidation of plans.

Assist your customers in developing a realistic projection of future demand by providing the proper sales forecast feedback, such as visibility into customer buying patterns. Simplify current processes for capturing critical demand information, like promotional events, to most effectively maintain the proper inventory levels and meet customer expectations.

Take control of collecting forecasts from external sources

Equip demand planning stakeholders to make valuable contributions to the forecast with web-based collaboration. Each planning stakeholder is presented a customized view of their market through an aggregated view of their customers and products. This information is in an easy-to-understand presentation of past sales performance and suggested forecasts (statistically generated). DCP provides each stakeholder with an update on the currency of information and status of each forecast update. At the same time, central forecast control can actively monitor the status of these updates within Demand Manager through the Demand Collaboration Portal status view.

The screenshot shows a web browser window titled "Demand Collaboration Portal". It features a table with columns for Customer ID, Part, Location, Forecast, and Status. Below the table are several buttons and a "Switch Forecast Management" section.

Demand Collaboration Portal's forecast entry screen provides valuable insight on past performance, forecast accuracy and suggested forecasts.

Demand Collaboration Portal Features

RockySoft's Demand Collaboration Portal combines the power of Web-based collaboration and synchronized forecast control to build the most accurate demand plan:

- Seamlessly integrated with Demand Manager—automatically integrates customer forecasts into the top level aggregation
- Provides an up-to-date status on each forecast
- Automatically tracks updates to forecasts and presents date of last revision
- Suggests a statistically generated forecast based on past performance
- Easy-to-use secure data entry
- Provides visibility into past years sales activity
- Automatic link to Demand Manager for diving into detailed graphical views of forecasts
- Easy to access from anywhere around the world and at anytime
- Centralized view of forecast update status

RockySoft's Inventory Management Suite Features

Easy to Use

Demand Manager and Demand Collaboration Portal are visually based, so you don't waste time looking through tables to find your information. Plus, a familiar Web-browser interface further enhances its ease of use. The Demand Manager and Collaboration Portal module are so easy to use that training can be delivered in as little as four hours.

Flexible Delivery Options

You can either deploy Demand Manager or Demand Collaboration Portal through purchase or license—from your own corporate server—or from RockySoft's affordable, Web-hosted environment. No matter which method you chose, the total implementation takes as little as 30 days. The software's rollout is fast, easy, and cost effective.

Connect to any ERP

RockySoft's software continually pulls forecast and planning data from any ERP system—either on your corporate server or RockySoft's Web-hosted site. Changes in forecasted demand or stock level become instantly available to any authorized user, anywhere in the world.

RockySoft—Delivering Greater Profitability Through Improved Inventory Management

RockySoft Corporation is dedicated to helping companies improve their profitability through better inventory management. Our Inventory Management Suite—a set of powerful forecasting, collaboration, planning, and replenishment tools—transforms complex, time-consuming inventory tasks into efficient, high-speed processes.
